

GROUND PROTECTION MATS (GPM)

PRODUCTS FOR PREPPING AND PROTECTING CONSTRUCTION SITES

EFFECTIVELY REMOVE MUD AND SEDIMENT FROM VEHICLE TIRES WHILE LEAVING THE GROUND BELOW SAFE FROM EROSION.

Ground Protection Mats (GPM) are portable, stable, and reusable for 10+ years. Their high-density polyethylene construction and interlocking hardware support up to 80 tons of pressure depending on the application and substrate. As a result, these mats are a quality solution for protecting construction site entryways. In addition, customers rely on GPMs to create temporary roads throughout the work zone because they minimize damage to grass, turf, or other soft substrates. For extremely muddy or rutted conditions, try our heavy-duty Mud Mats.

AVAILABLE UNITS
