

## Hydro-Seeding by Helicopter

Eastern, WV

### Product Advantages:

- Profile PS3 Soil Testing
- Profile Flexterra, provides erosion protection for steep slopes and a near perfect seed bed
- Profile ProGanics, introduce organics in rocky areas to establish vegetation.
- EarthShield Midwest Contractors Mix

### The Challenge

A customer called into our Fairmont, WV location to order materials for an upcoming seeding project involving limited access, steep terrain, rented hydro-seeders and a helicopter. Our Ferguson associate realized the products they asked for were not the best solution for the project and brought in our Geo & Stormwater experts to contact the customer. After a site visit and collection of soil samples, we were able to offer a solution.

### The Solution

Profile Products Flexterra, ProGanics and Blend mulches along with amendments based on the soil test results were recommended. The Product Specialist was onsite to provide training for the customers' crew on how to operate the Hydro-seeders and interact with the helicopter pilot to achieve the proper mix ratios for soil coverage. Even with an exceptional drought occurring during the fall, the Right of Way (ROW) was fully vegetated in 3 months.
