

PAVING FABRICS

GEOTEXTILES USED FOR PAVING APPLICATIONS

OUR COST-EFFECTIVE PAVEMENT PRESERVATION SOLUTIONS TO KEEP WATER OUT OF PAVEMENTS, MITIGATE REFLECTIVE CRACKING, AND REINFORCE PAVEMENTS.

Paving geotextiles are installed with liquid asphaltic tack coat to provide a waterproof barrier between old and new asphalt applications. This barrier retards reflective cracking and extends the life of the new pavement system.

Fiberglass paving mats work like traditional fabric but adds a reinforcing capability, preventing moderate to heavy cracks from reflecting into a new overlay.

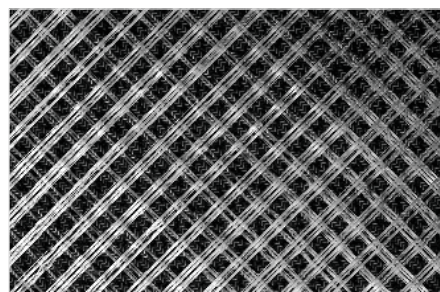

Pavement Crack Repair - Products such as Petrotac, GeoTac, PavePrep offer a peel and stick option to mitigate further deterioration of the area through waterproofing.

ADVANTAGES

- **Paving Fabrics:** Various weights of nonwoven geotextiles.
- **Fiberglass Paving Mats:** Cost effective repair, quick installation, and repaving with hot mix asphalt.
- **Pavement Crack Repair:** Waterproofing membrane that prevents water penetration and stress relief interlayer that retards reflective cracking
